PROFILE

Design engineer who goes from user interviews to shipped code, next to engineers. I design agentic tools for cloud engineers at Tessell, and built Air Atlas, a live globe of Copernicus air data.

EXPERIENCE

Tessell — Product Designer, Bengaluru — Feb 2024 – Present

Multi-cloud database platform. Escher is its AI cloud operations product.

Escher, AI cloud operations

- **Agentic workflows.** Designed the loop from question to fix: answer, plan, approve, run, re-check. Each plan shows its blast radius from the estate graph, with a dry run and rollback.
- **Reusable building blocks.** Built the generative UI layer: the AI answers with 60+ typed components instead of prose, 13 of them custom, like topology diagrams, citations and reports.
- **Prototype in code.** Led the Escher prototype repo in React and TypeScript with Claude Code (395 of 570 commits). Also building the production desktop app's frontend.
- **Cloud estate dashboard.** Designed 15+ widgets for cost, security, compliance and infrastructure, plus an interactive topology graph of cloud resources.
- **Research.** Interviewed sales engineers and leadership on how demos run. Designed a hidden layer that reads buying intent and adapts the conversation.
- **Design system.** Built from first principles. Both product lines use it, and a UI engineer now maintains it.
- **New ways of working.** Ran a Figma Make workshop for designers and AI workshops company-wide.
- **Fetch.** Won the internal hackathon with an AI search over company docs, built in 48 hours. 40 to 50 people use it daily.
- **Hiring.** Helped hire 10 people across product design, visual design and UI engineering.

Atlassian — Product Design Intern, remote — May 2023 – Jul 2023

- Researched why admins quit the Cloud Migration Assistant midway. Audited 25 screens across 3 journeys for points that broke trust.
- Redesigned the 3 worst flows, and ran ideation workshops to map how they depend on each other.

PROJECTS

Air Atlas — Design and code, solo, 2026 — pkrunal.com/air-pollution-map

- Globe of Copernicus CAMS forecasts: 28 layered fields, 45 km worldwide and 11 km over Europe.
- Two time sliders: a 48-hour forecast in 3-hour steps, and monthly means back to August 2022.
- Point readout with WHO guideline multiples, and a study page that charts how fields correlate.
- Daily data refresh in GitHub Actions. Shipped through pull requests with tests.

OpenFOAM Studio — Design and code, solo, open source, 2026 — case study

- Describe a CFD simulation in plain English. The app writes the case, runs OpenFOAM and checks it.

OneStop — Sole designer, IIT Guwahati, 2022

- Campus super-app with 5 segments. 19k+ monthly users and a 4.7 rating from 200+ reviews.

EDUCATION

IIT Guwahati — B.Tech Chemical Engineering (8.3) and Minor in Product Design (9.0) — 2020 – 2024

AWARDS

Gold, Paradime brief, Inter IIT Tech Meet	2023	Winner, Tessellate hackathon, Tessell	2025
Silver, Trumio brief, Inter IIT Tech Meet	2024	4th, GrowSimplee brief, Inter IIT Tech Meet	2023

SKILLS

Design	Geospatial and time-series UI, data visualisation, agentic workflows, design systems, interaction design, user research, usability testing, accessibility, workshops
Build	Figma, Claude Code, Git, Python. Elementary: React, TypeScript, Three.js, D3.js, Electron
Courses	AWS Cloud Practitioner, Product Planning and Strategy (10/10), Fundamentals of AI
Leadership	Head of Design, Welfare Board · Coding Club co-ordinator · Inter IIT contingent manager
